

① The query "SELECT ZleName FROM ZootmpTable ORDER BY 3 ASC;" will not execute successfully in this case. Whenever we mention a number after the ORDER BY clause, it sorts the n^{th} column mentioned in the schema. As there is no 3rd column in ZootmpTable, it will give an out of range error

② SELECT employeeName FROM employees WHERE insurancePolicy = "SBI-LIFE-INSURANCE";
This query shall list all those employee names who avail SBI life insurance

③ CREATE PROCEDURE mthHighestSalesVolume @m INT
AS SELECT ^{TOP 1} sales-volume FROM (SELECT TOP @m sales-volume FROM sales ORDER BY sales-volume ASC) AS table ORDER BY sales-volume DESC ^{GO};
EXEC mthHighestSalesVolume @m=5;

4) TRUE.

Whenever we drop a table using DROP TABLE command, SQL removes all those associated features such as constraints, indices, procedures, etc.

5) In case we want alternate even records, we execute the following query:

```
SELECT * FROM Std-Info-Details WHERE Std-Dep  
artment % 2 = 0;
```

In case of odd numbered records,

```
SELECT * FROM Std-Info-Details WHERE Std-  
Department % 2 = 1;
```

6) CREATE TABLE New-UniversityTable AS SELECT *
FROM ~~New~~ UniversityTable WHERE 1=2;

Here, this query would duplicate the schema of the old

table but will not copy the tuples as 1 \neq 2.

7 DELETE FROM EmployeeTable WHERE NOT IN

(SELECT MAX(Emp-id) FROM EmployeeTable
GROUP BY Emp-id);
